## V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

### 1. Statement

Novelty (N)	Claims	9, 10	YES
	Claims	1-8, 11-18	NO
Inventive step (IS)	Claims		YES
	Claims	9, 10	NO
Industrial applicability (IA)	Claims	1-18	YES
	Claims		NO

### 2. Citations and explanations

Reference is made to the following document:

D1: GB 2 366 055

- Document D1, which is considered to be the prior art closest to the subject matter of claims 1, 17 and 18, discloses the following (the references in parentheses are to D1):

Method for providing information support to a motor vehicle driver by means of an in-vehicle multimedia system (D1, page 1, line 1), comprising an in-vehicle computer and an external computer (D1, figure 1, (22) and 23)) which exchange data at least intermittently via bidirectional communication (D1, figure 1, (14) and 16)),

characterised in that

special memory areas are provided in the in-vehicle computer and the external computer; wherein the contents of the memory areas are characteristic of elements of a set of information which is available to and can be selected by the driver using the in-vehicle multimedia system (D1, page 2, lines 8 to 9; D1, page 8, lines 6 to 7); wherein the contents of these special memory areas are driver-modifiable via an input mode that does

not inhibit driving safety (D1, page 8, lines 9 to 10); wherein the contents of these special memory areas are automatically compared with each other (D1, page 12, lines 20 to 23); and wherein data is not exchanged via bidirectional communication until it has been selected and/or modified by the driver. *(This data can only be multimedia data; the dynamic exchange of information for the purpose of automatic comparison can also take place without selection and/or modification by the driver, as stated in the description (page 11, lines 30 to 35.)*

In D1, "services" are available; for example (page 8, lines 4 to 6), the user can choose from the various possible files or services, and **then** the information is transmitted. The system described in D1 also transmits advertisements (D1, page 11, lines 1 to 8) so that the user can select a new service.

Since these are all technical features of claim 1, the subject matter of claim 1 lacks novelty (PCT Article 33(1)).

Independent claims 17 and 18 relate to a corresponding computer program and computer program product. For the reasons given above, the subject matter of these claims also lacks novelty (PCT Article 33(1)).

Dependent claims 2 to 16 do not contain any features that meet the PCT requirements in respect of novelty and inventive step when combined with the features of any of the back-referenced claims.
